

ON-AIR™
Firestone

**Install ON-AIR airbags and have control to
LEVEL UP FRONT to BACK - SIDE to SIDE**

A safe solution for a sagging rear end!

ON-AIR airbags will help you...

- ✓ Lower your vehicle when loading passengers or cargo
- ✓ Lift up the sagging rear end of your loaded vehicle
- ✓ Maximise the safe load carrying capacity
- ✓ Maintain a level vehicle - adjustable control
- ✓ Keep headlights aimed straight on the road
- ✓ Improve ride quality and reduce tyre wear
- ✓ Greatly reduce "bottoming out"
- ✓ Improve steering and balance
- ✓ Increase vehicle stability
- ✓ Improve fuel economy

**Simple air inflation
LIFTS UP your sagging
rear end and makes
driving much SAFER!
Remote fingertip
levelling control
is also
available.**

How it works is simple -

Coil springs are removed totally and are replaced with airbags, providing load support through the adjustment of air pressure. All you need then to lift a sagging rear end is a tyre pump or small compressor. Inflate the air bags and you can lift your rear end back to a safe level position. Independent four wheel levelling control also allows you to lower and raise your vehicle.

Airbag Man air suspension kits are designed to level vehicles when towing or carrying a load. They are NOT designed to allow a vehicle to exceed the manufacturers load ratings.

LEVEL UP WITH ON-AIR AIRBAGS

Lower & raise suspension for -

- 4WD Vehicles
- SUV's
- Trade Utes
- Commercial Vehicles
- Motor Homes

On-Air gives you the advantage of total air suspension where your coil springs are removed and replaced with heavy duty airbags. You can lower your vehicle for easy loading then raise, giving you front-to-rear & side-to-side levelling control.

This enables your vehicle to "level up" when towing caravans, boats and trailers or when a vehicle or truck is carrying heavy, uneven loads - providing full adjustability when towing, off-road use or for passenger / cargo loading.

The airbags are heavy duty two ply, reinforced rubber rolling sleeves, the same construction as used on heavy duty trucks and buses. All components are supplied in kit form, however we recommend fitment by your local Airbag Man Dealer.

Once installed, you can adjust the airbags for varying loads and road conditions by simply inflating or deflating, just like inflating or deflating a car tyre. You can also have the optional advantage of finger-tip remote levelling control for your vehicle.

Airbag Man provides you with a high level of customer service with a nationwide dealer network. We're here to help you with all your requirements and to provide any advice and information that you may need.
