

# BREATHE EASY SAFARI SNORKELS

From the Amazon to the Andies - from the Kalahari to the Kimberley - from the Sahara to the Simpson, four wheel drivers the world over have put their trust in a genuine Safari Snorkel System.

Pioneered in Australia in the early 1980's, Safari Snorkels were born out of a need to protect 4WD engines from the hazards of dust and water commonly encountered in touring and off road applications.

In arguably the best, if not toughest environment, Safari Snorkel Systems are thoroughly researched, tested and tooled for each unique model of popular 4WD in Australia. Genuine Safari Snorkels - the snorkel trusted by Australians.

Safari Snorkel Systems are manufactured to the highest standards in durable, UV stable, cross linked polyethylene material and deliver a continuous and cooler supply of air for maximum engine performance. Each system includes quality fixtures and fittings that deliver superior sealing, OEM levels of

presentation and long-term durability.

In addition, Safari Snorkels are positively sealed in order to provide

the engine with the ultimate in protection during river crossings and dusty desert driving conditions.

All Safari Charge Air Rams feature a highly effective water separator system built right into the air ram in order to remove rain water from the incoming air stream - thus ensuring safe engine operation through even the most torrential tropical storms.

An added benefit of the unique Safari Charge Air Ram is that it can be rotated to any position. This means great peace of mind for those who plan to travel in cold or high

altitude conditions where heavy snow falls are anticipated. By rotating the air ram to face away from the prevailing wind/direction of motion, the air ram delivers additional protection from the choking effects of snow build-up inside the air intake.

**DON'T GET  
BURNT**

[Plastic ain't plastic. Click here to learn about the importance of choosing a snorkel product manufactured from the correct material compound](#)

Not unlike the UV rating of sunblock creams on humans; the UV number applied to Plastics being exposed to the sun's UV rays, indicates the level of protection and consequently, life of the snorkel. In order to deliver the 20 plus year life expected of Safari Snorkels, a specially compounded material is used to result in a rating of at least UV20. This contrasts markedly to other brand snorkels manufactured outside Australia. Even when these foreign snorkels use material sourced from quality major international suppliers, (such as Mobil Exxon), the finished product typically has a UV rating of only 8 - far short of the UV20 rating required for long snorkel service life.

Safari Snorkels were twice awarded Best After Market Product of the Year by 4X4 Australia Magazine, and are distributed extensively in Australia and around the world.

**Breathe Easy** - When you choose a Genuine Safari Snorkel System, you are choosing the industry's best.
